

Itax download instructions for Upgrades and New Installations.

Both New Installations and existing program upgrades are from a single file.

After clicking on the yellow link, and depending on your internet browser, you may be presented with 2 options, Save or Run. If you elect to Save the file, please do not save the file in any program directory. It is safest to Save it to the Desktop or in the My Downloads folder.

If you elect to Run the program, a temporary copy will be downloaded to you computer. You may be presented with a message that the publisher cannot be determined. It is safe in this instance to continue to run the program. You should have the password available at this time since you will be immediately prompted for it.

After entering the password, follow the prompts. Existing programs will automatically be detected and the files will go to the proper location. New installations will go to the Install Shield Wizard. Both will prompt you when the process is complete.
